EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion. The cDNA fragments were directionally cloned into the EcoRI-xhoI restriction site were transformed into the EcoRI-xhoI restriction site were transformed into the EcoRI-xhoI restriction site beautiful in the ligated cDNA fragments were transformed into the EcoRI-xhoI restriction site of the pBluescript vector. The ligated cDNA fragments

/lab_host="E. coli BM25.8"
/note="organ: shoot tips; Vector: Lambda TriplEx; Site_1:
Sfil (A); Site_2: Sfil (B); Shoot tips (approx. 2 cm from apex) were collected during the spring, frozen and used for mRNA isolation. The SMART-PCR method (Clontech) was used to prepare a library from 1 ug total RNA, using the Lambda TriplEx vector. Plasmid subclones in pTriplEx were recovered by cre-lox excision in E. coli strain BM25.8 and sequenced from the 5' end."

This library was made from sections of dormant tuber, avoiding the buds and epidermis. Tubers were stored for one month post-harvest at 4oc. The tuber was peeled, well away from the surface. Then it was chopped into 1-2 mm cubes and immediately frozen in liquid nitrogen. This library is noted as P4 in Tanksley lab notebooks."

Genes with similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as 'unknown' proteins. Genes without protein or EST similarity, that are predicted by two or more gene prediction programs over most of their length are annotated as 'hypothetical' proteins. Genes encoding tRNAs are predicted by tRNAscan SE (Sean Eddy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (ftp://arthur.epm.ornl.gov/pub/xgrail), Genefinder (Phil Green, university of Washington), Genscan (Chris Burge, http://gnmic.stanford.edu/GENSCANW.html), and NetPlantGene (http://www.cbs.dtu.dk/services/NetGene2/), searches of the complete sequence against a peptide database and plant EST databases at TIGR, and manual curations based on those analyses. Annotated genes are named to indicate the level of evidence for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (09-MAR-2000) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 20850, USA. On Dec 17, 1999 this sequence version replaced gi:4587677. The sequence and annotation of chromosome 2 were merged from those of the individual clones on this chromosome after removing overlaps. For detailed information, please see the TIGR web site (http://www.tigr.org/tdb/at/at.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Goodman,H.M., Somerville,C.R., Copenhaver,G.P., Preuss,D., Nierman,W.C., White,O., Elsen,J.A., Salzberg,S.L., Fraser,C.M. and Venter,J.C.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                              The sequence given in AAC85204 represents a plant D1 cyclin can hibitor gene, BRO3. This sequence was isolated using a yeast two CC hybrid screen. The BRO3 protein was found to contain a seven amino CC acid sequence cyclin binding domain similar to that of BRO1, BRO2 CC and BRO4 (See also AAB47005-6). This sequence is homologous to a cc sequence present in a D-like cyclin inhibitor gene and when integrated CC at the corresponding locus, functionally inactivates plant D-like cyclin inhibitor protein expression. The BRO4 coding sequence may CC be used to produce a hyperplastic variant plant, increase the growth CC rate of a plant, or increase the proportion of dividing cells in a CC plant cell population, relative to a wild-type plant, by functionally CC gene in a plant. BRO4 is useful for increasing the proportion of CC dividing cells in a plant cell population comprising protoplast, CC seeds, root cells, meristem cells or leaf cells.
